

STRATEGY OVERVIEW:

WASTE MANAGEMENT

Key Requirements	Measurement
Procure and deploy products that minimise waste generation.	
Re-use materials wherever possible to minimise waste produced.	Company Objective
Increase use of renewable products and resources.	Company Objective
Procure and deploy equipment to deliver waste minimisation effectiveness.	
State of the art equipment will be employed to ensure volume of waste is minimised.	Company Objective
Conserve Resources.	
Where possible, tyres will re-used for engineering in landfill sites, and other structural uses.	Company Objective
Solvents will be recycled, where practical, and their use minimised.	Company Procedures
As part of the construction and demolition process, recycled material will be utilised where possible.	Company Objective
Used oil will be recycled.	Company Procedures
Other materials will be recycled and re-used in preference to using landfill void space.	Company Objective
Procure and deploy equipment to deliver optimised recycling and re-use of resources.	
State of the art equipment will be employed at recycling facilities to maximise returns and minimise environmental impact of wastes.	Company Objective
