Since our acquisition of Loanhead Quarry in Oct 2006 we have established a reputation for quality and service. This has been achieved through significant investment in crushing and screening equipment, together with the quarry being supported by our extensive internal haulage fleet.

The quarry has successfully supplied various high profile jobs such as the A737 road network at Lochwinnoch and the recent SFA football facility at Toryglen, Glasgow.

Loanhead Quarry also supports our internal contracts divisions who have recently completed many construction projects in the West of Scotland.

Our investment in plant and machinery has allowed us a great degree of flexibility while maintaining a healthy stock of all materials, ranging from bulk fill to single size pipe bedding. This flexibility allows our production team to produce non-specific types of material on request for both our internal and external markets. Our current stock of materials is listed across.

“Our experience within the construction industry is wide and varied, working in partnership with high profile and well respected clients delivering a first class service”

We pride ourselves on developing long term relationships with our customer base. The implementation and imminent accreditation to the quality scheme ISO 9001 will allow us to develop these relationships with customer service and material quality becoming measurable within our business.

- Type 1 sub base CL803
- 0/80mm Crusher Run
- 50/100mm Single Size Whinstone
- 20/40mm Single Size Whinstone
- 10/20mm Single Size Whinstone
